

# **Sea-level Rise Modeling Handbook: A Resource Guide for Coastal Land Managers, Engineers, and Scientists**

**Thomas W. Doyle**

**US Geological Survey, National Wetlands Research Center, Lafayette, LA, USA**

# SLR Handbook Outline

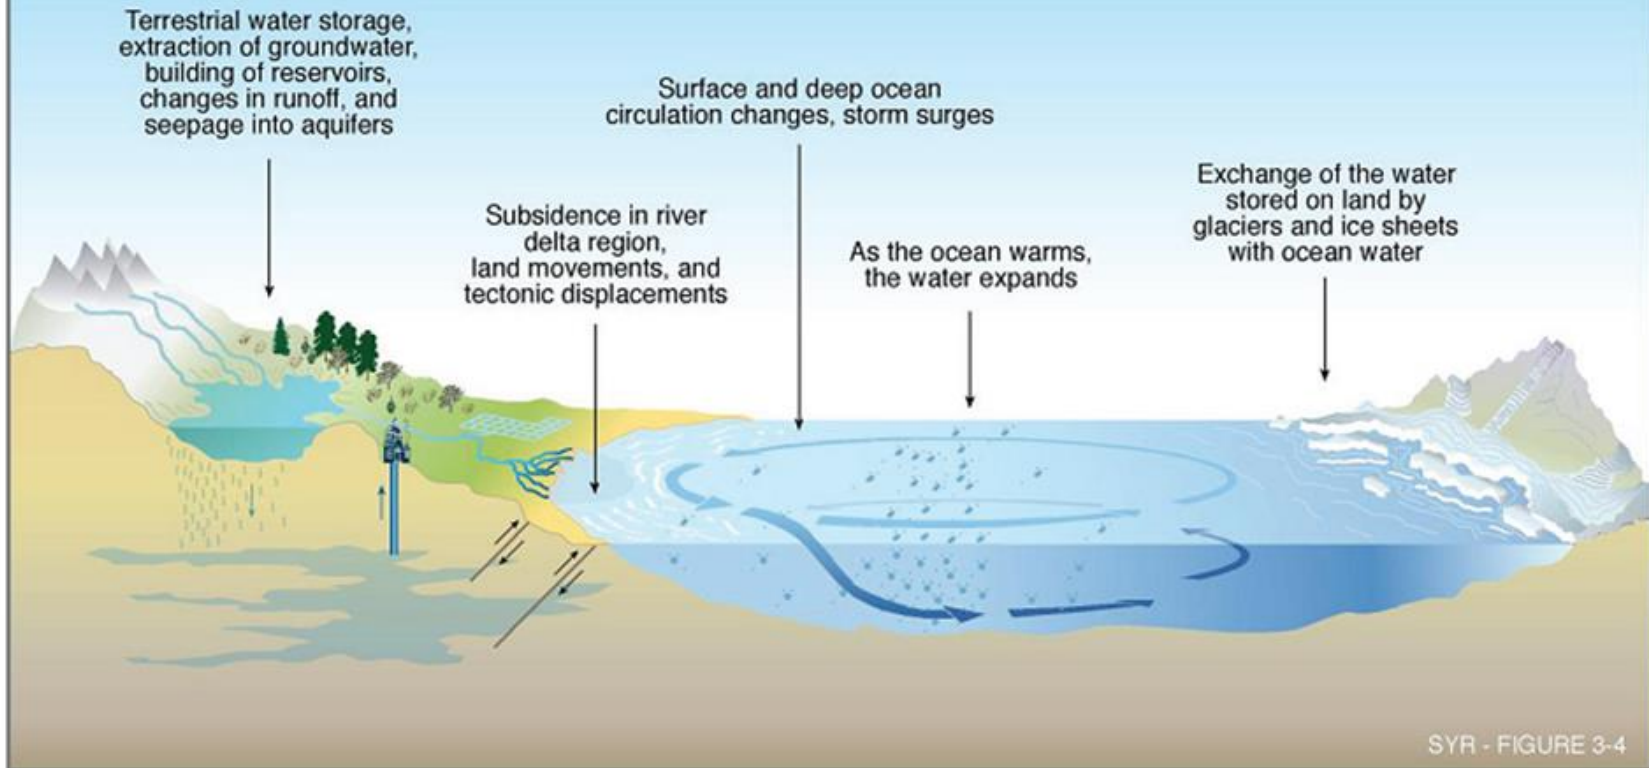

- **Understanding Sea-Level Change**
  - Methods for Reconstructing and Observing SLR
- **Predicting Sea-Level Rise Impacts**
  - Models for Simulating SLR Effects on Ecosystems

# Understanding Sea-Level Change

- **Earth's Hydrosphere**
  - Volume Static
  - Form Dynamic
- **Reconstructing Sea-Level History**
  - Effects of Plate Tectonics (Size of Ocean Basins)
  - Effects of Glaciation (Orbital Cycles)
  - Holocene Sea-Level Rise (Since Last Glacial Maximum)
- **Contemporary Sea-Level Record**
  - Long-term Tide Gage Relative Sea-Level Rise
  - Satellite Sea-Surface Height Observations
  - Land Motion and Subsidence/Uplift
- **Future Sea-Level Projections**

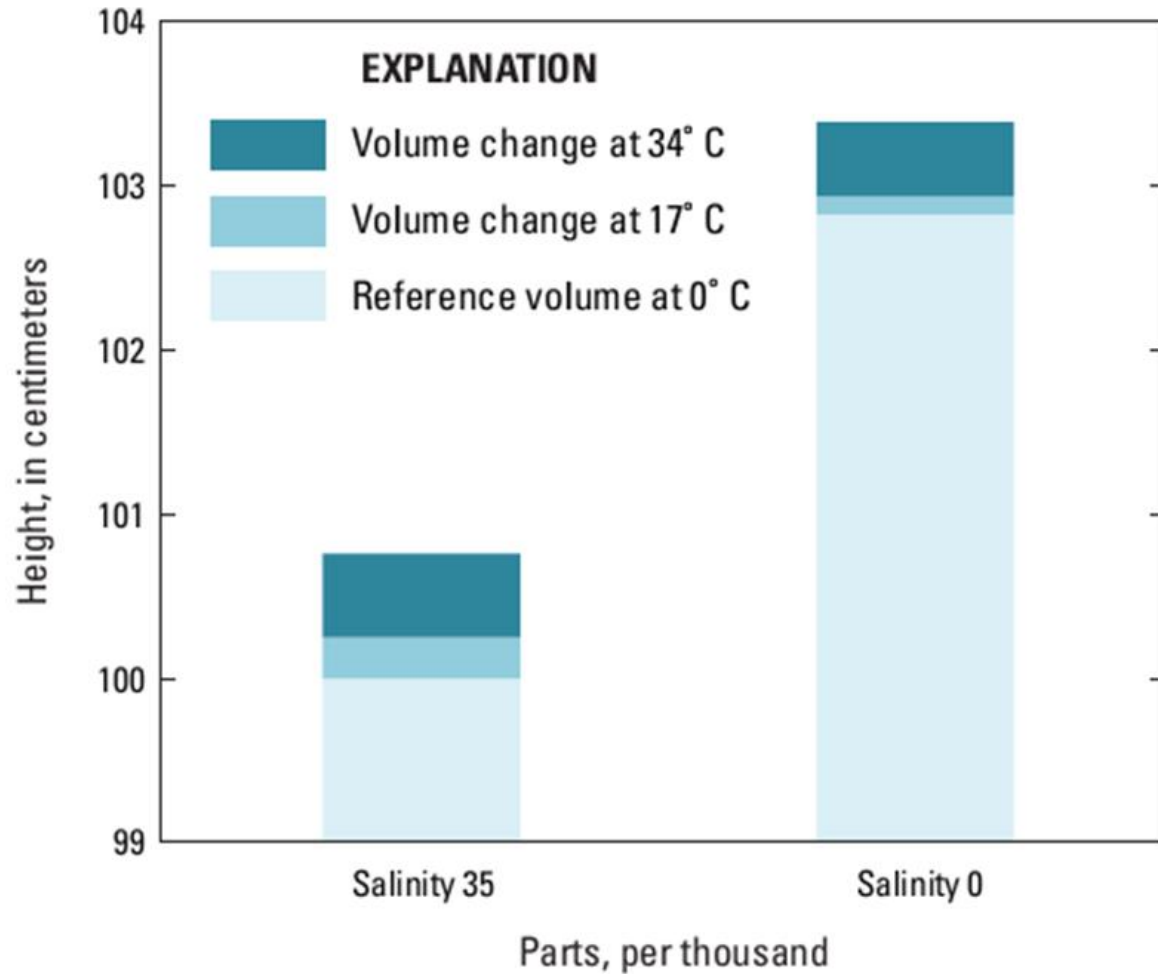

# Earth's Hydrosphere

## What causes the sea level to change?

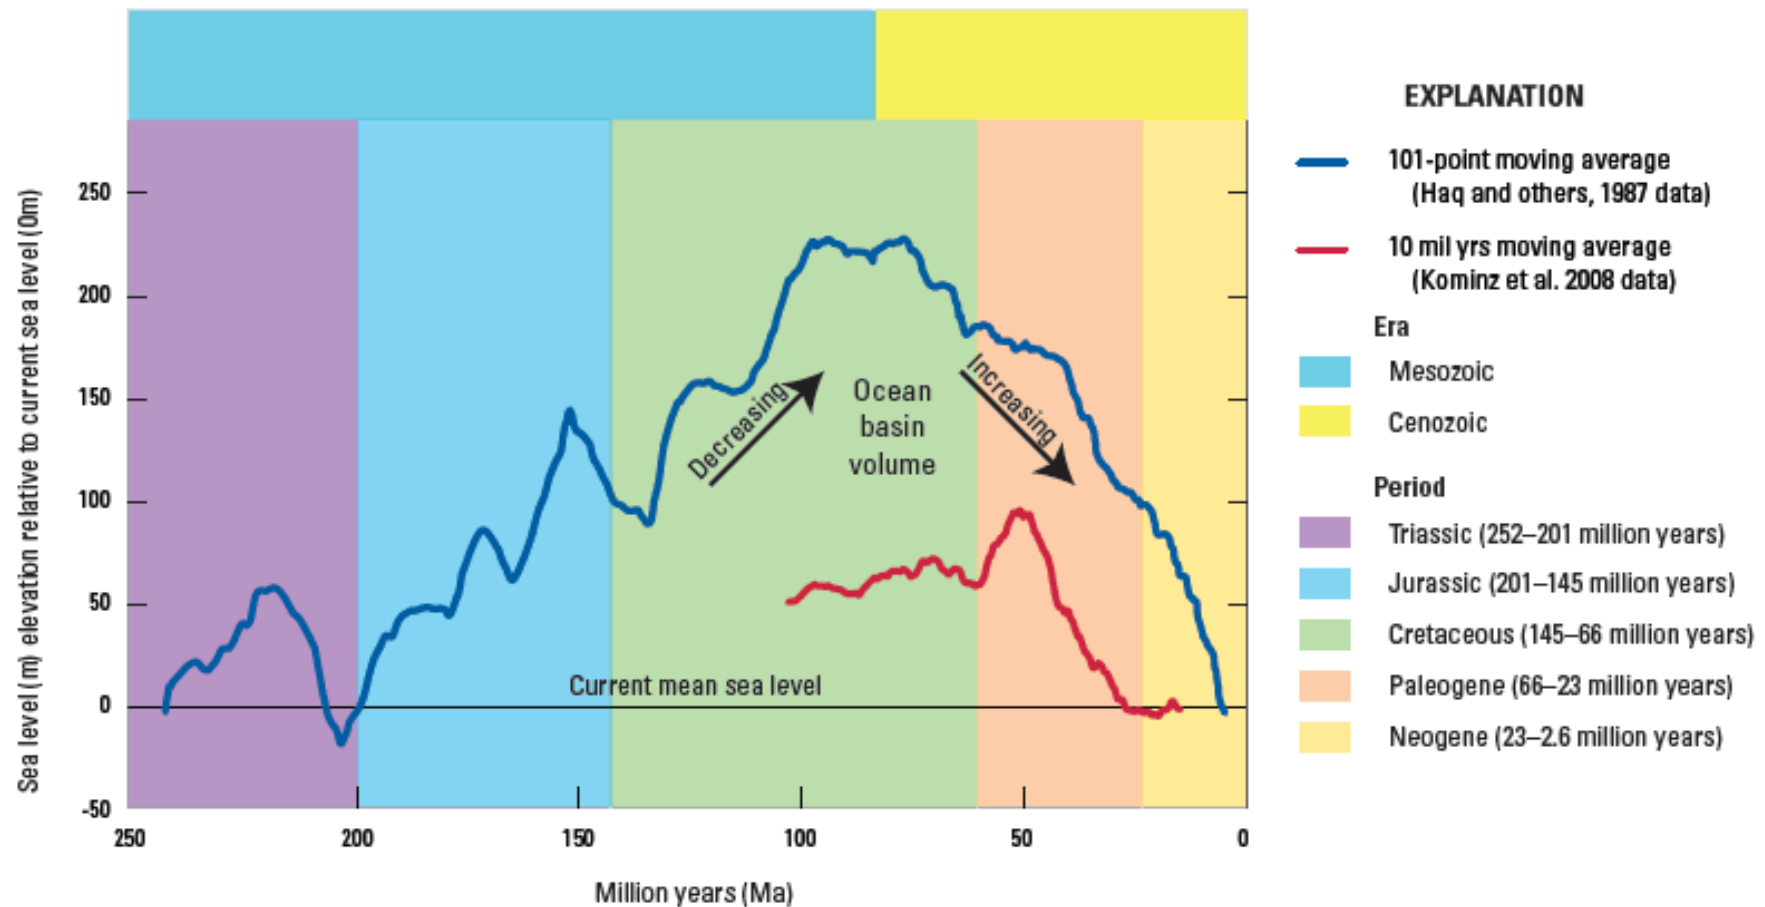

SYR - FIGURE 3-4

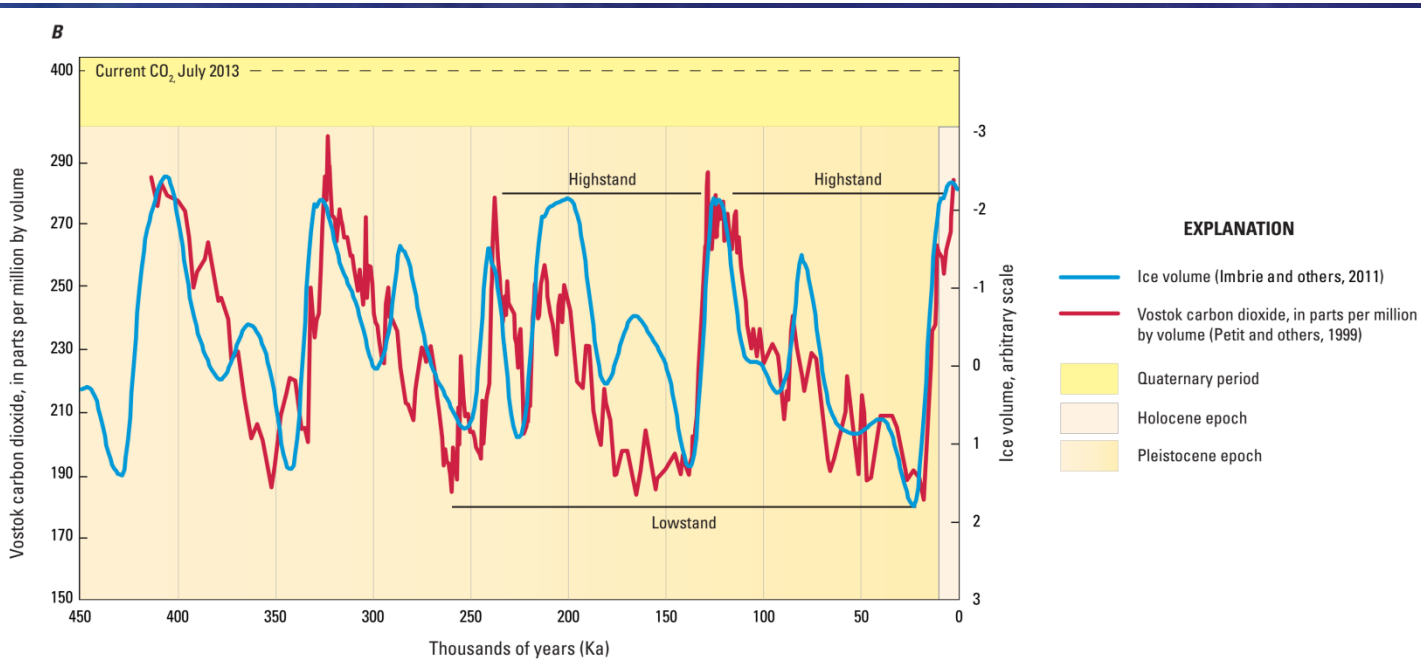

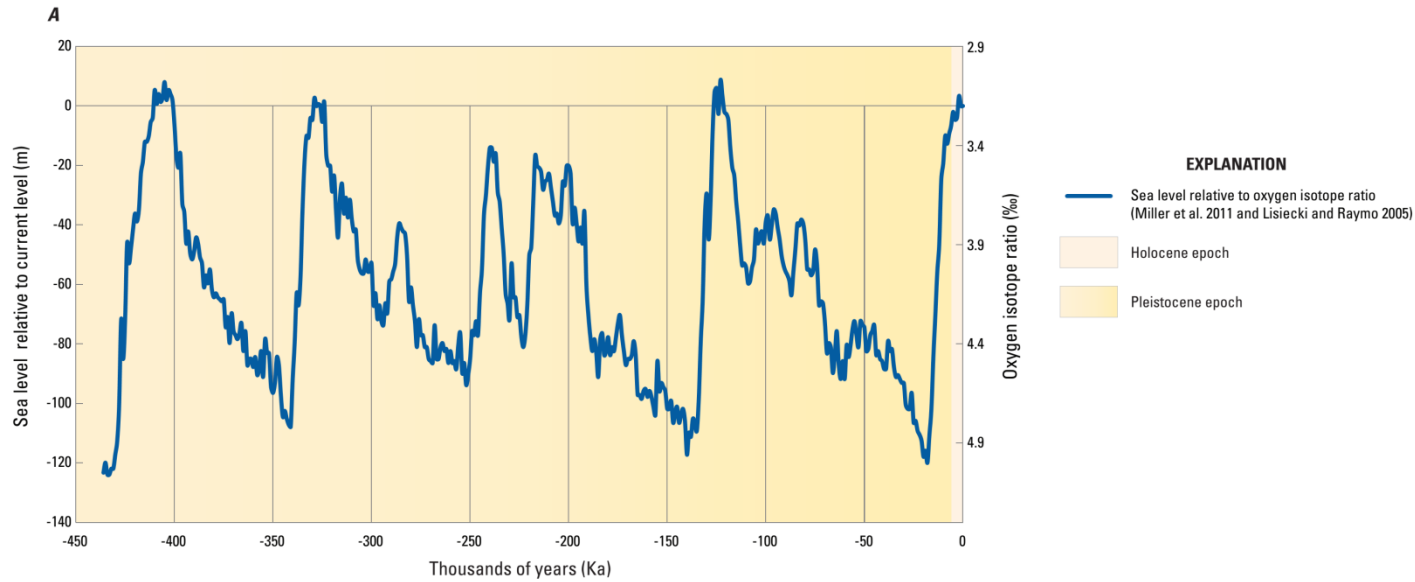

# Temperature Effect on Water Expansion

# Effects of Plate Tectonics

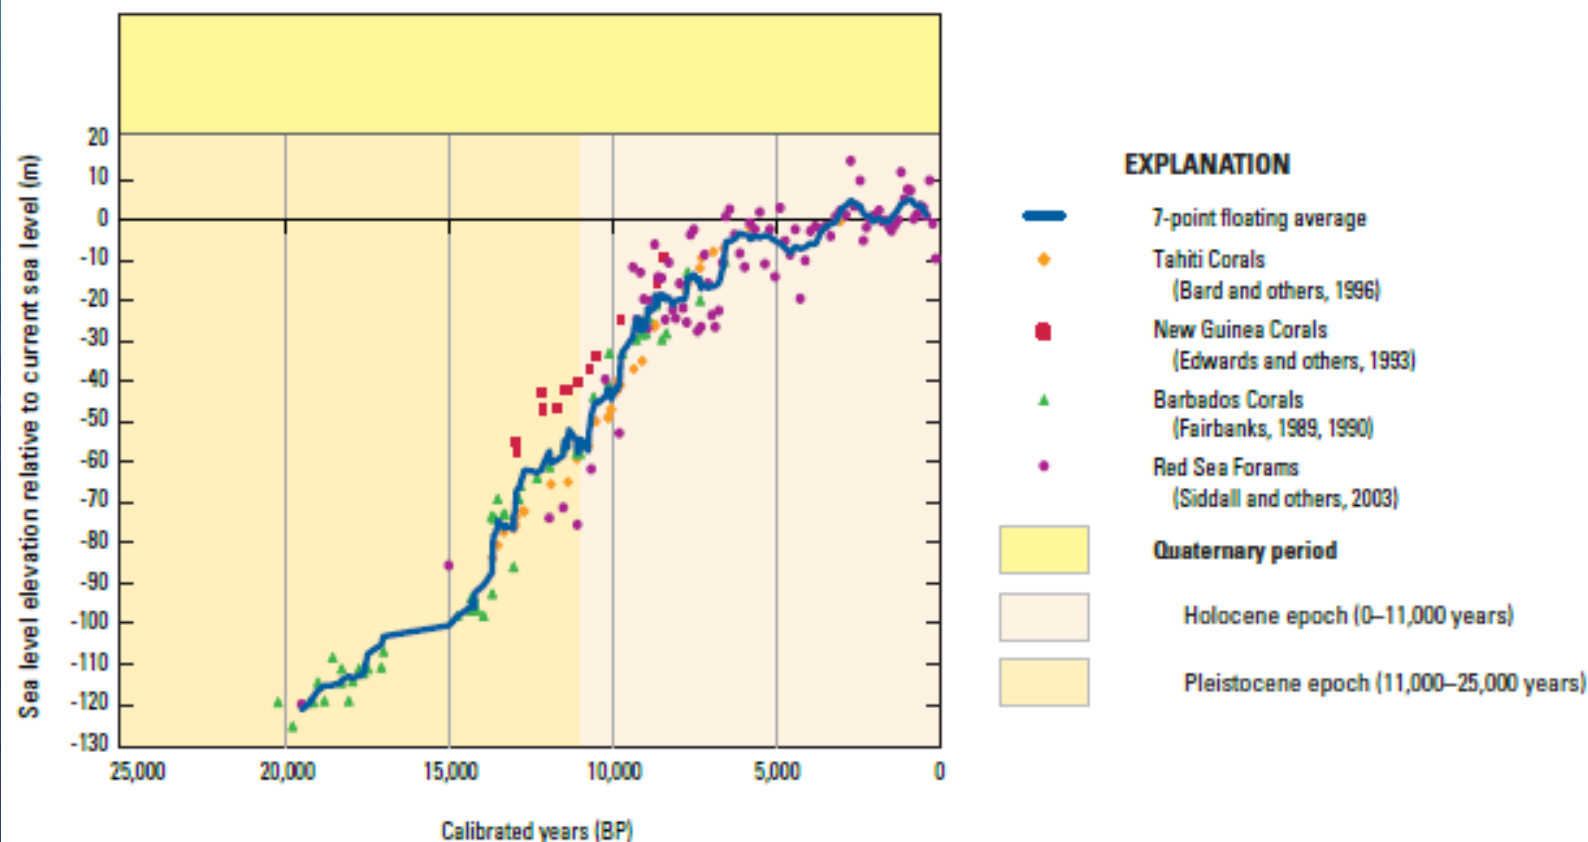

# Effects of Glaciation

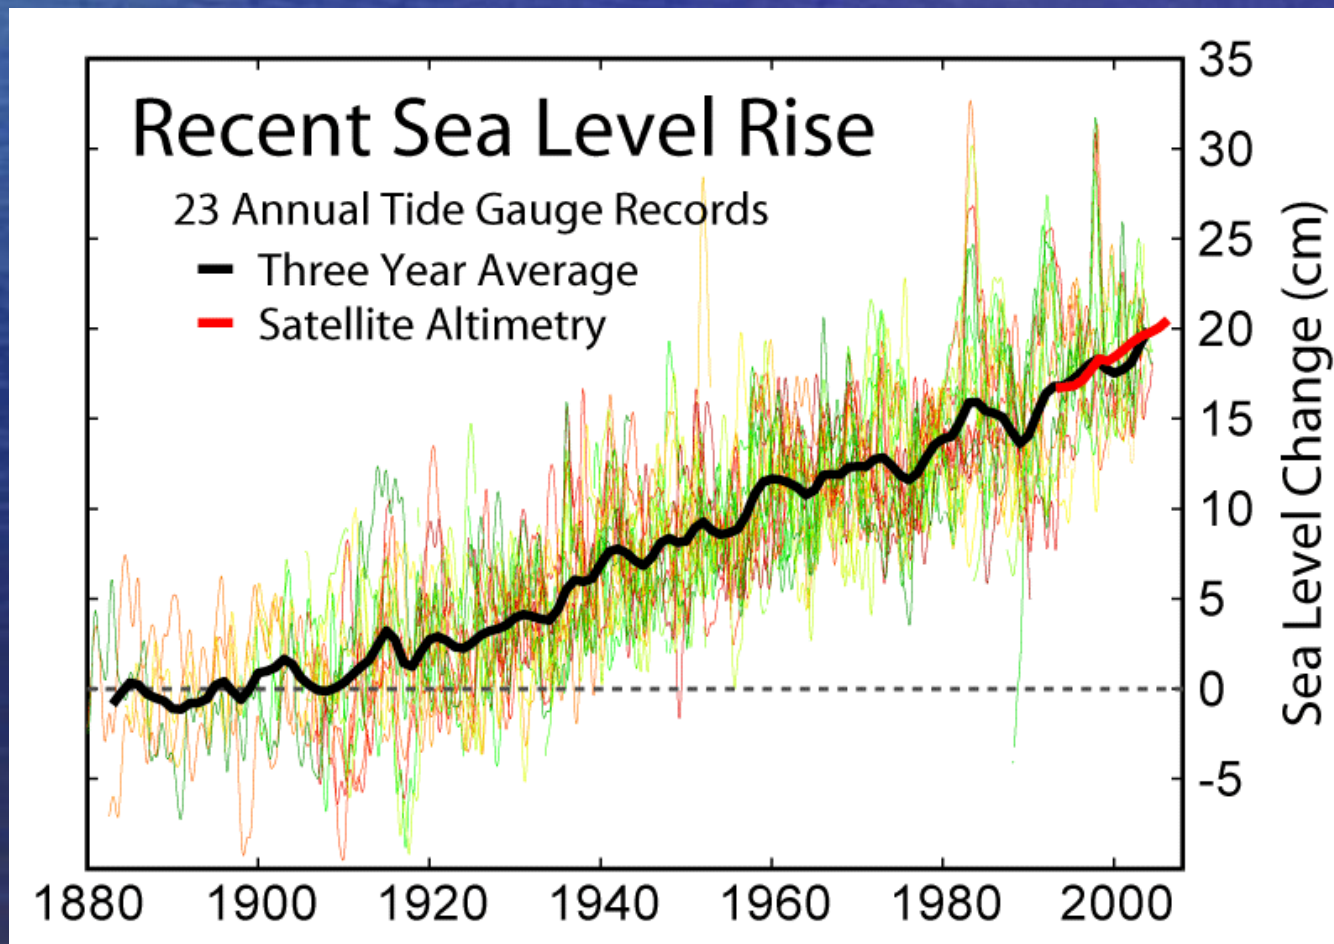

# Holocene Sea-Level Rise

Balsillie and Donoghue 2004

# Contemporary Sea-Level Rise

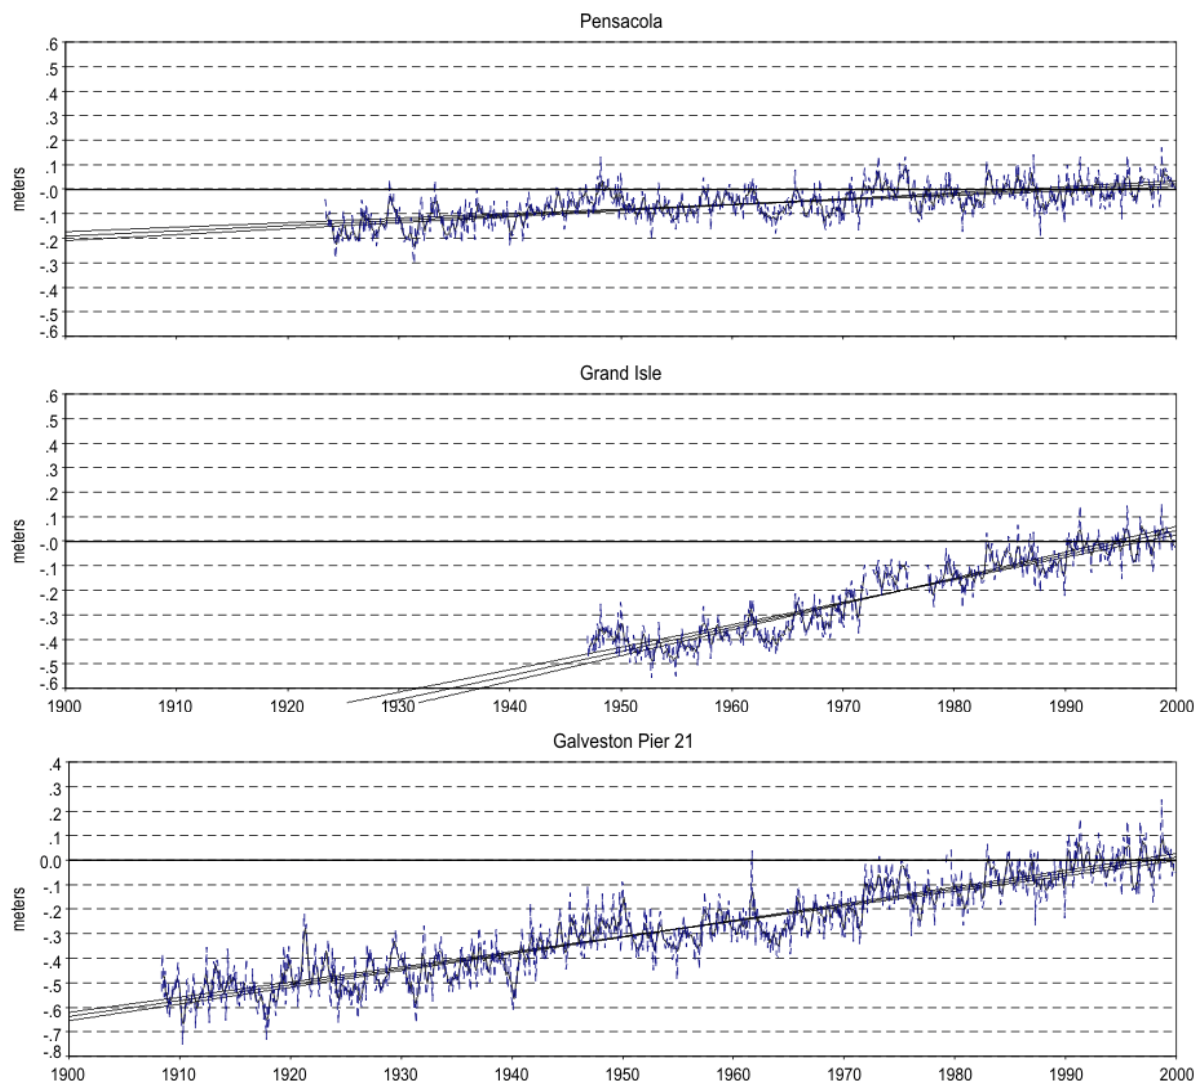

Sea level measurements from 23 long tide gauge records in geologically stable environments show a rise of around 20 centimeters per century (2 mm/year). Source: IPCC 2001

# Relative Mean Sea-Level Rise

- RSLR = Relative Sea-Level Rise
- $\text{RSLR} = f(\Delta \text{ sea level} + \Delta \text{ land surface elevation})$
- $\Delta \text{ Sea height} = f(\text{eustacy, gravity, winds, waves, etc.})$
- $\Delta \text{ Land height} = f(\text{subsidence, deposition, erosion, etc.})$

# Relative Sea-level Rise for Gulf Coast USA

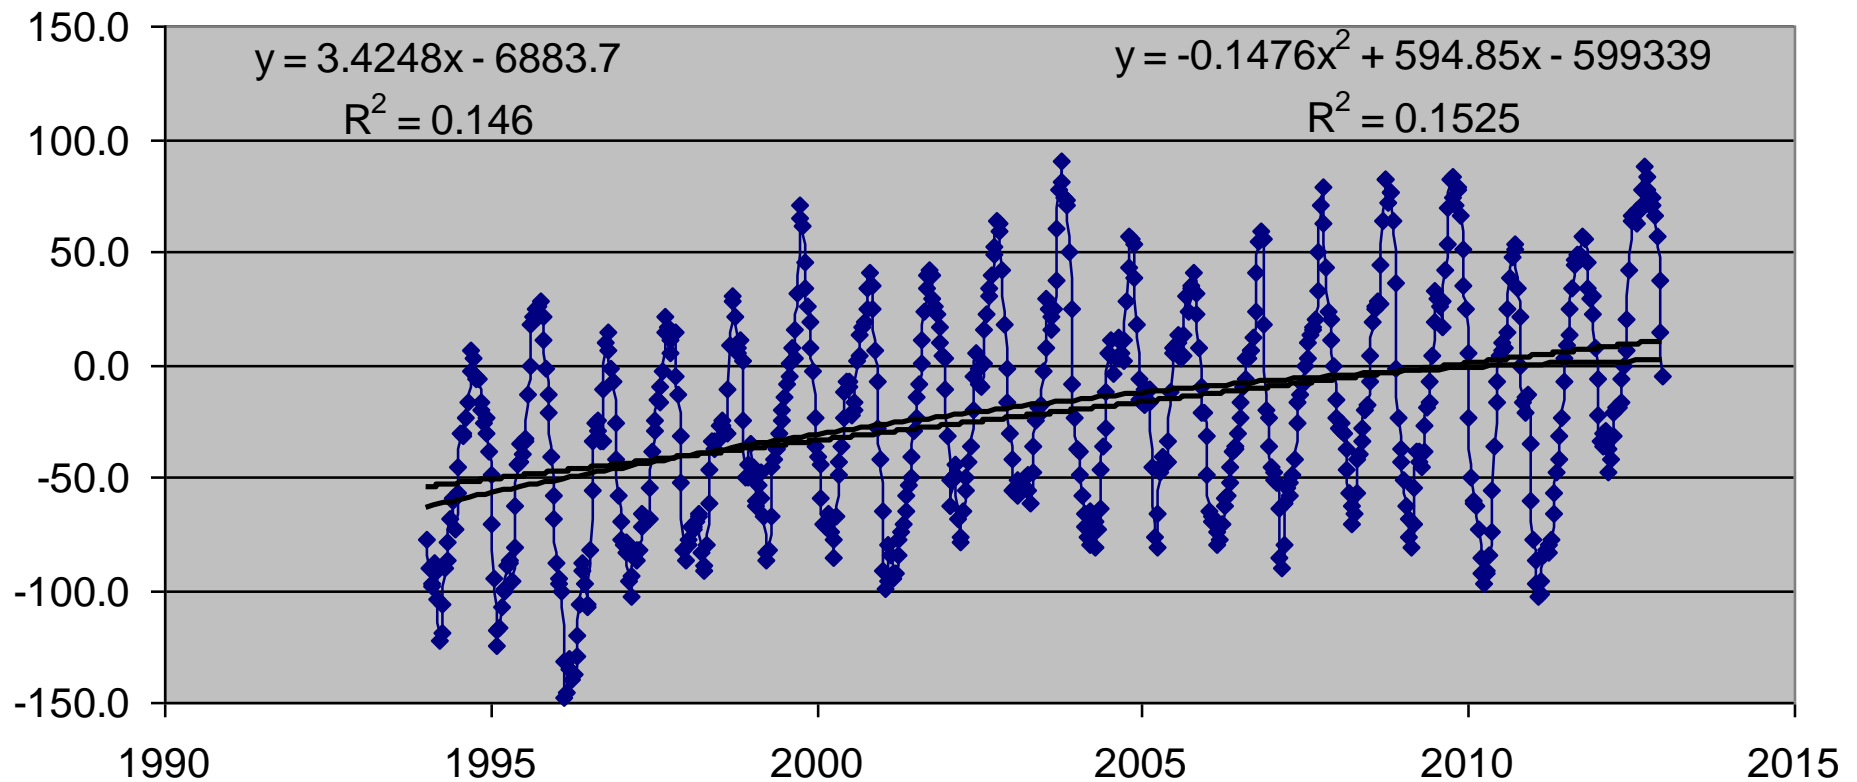

**RSLR=2.14mm/yr**  
**RSLR=2.10mm/yr**  
 Pensacola, FL  
 Stable Geology

**RSLR=9.85mm/yr**  
**RSLR=9.24mm/yr**  
 Grand Isle, LA  
 Deltaic Plain

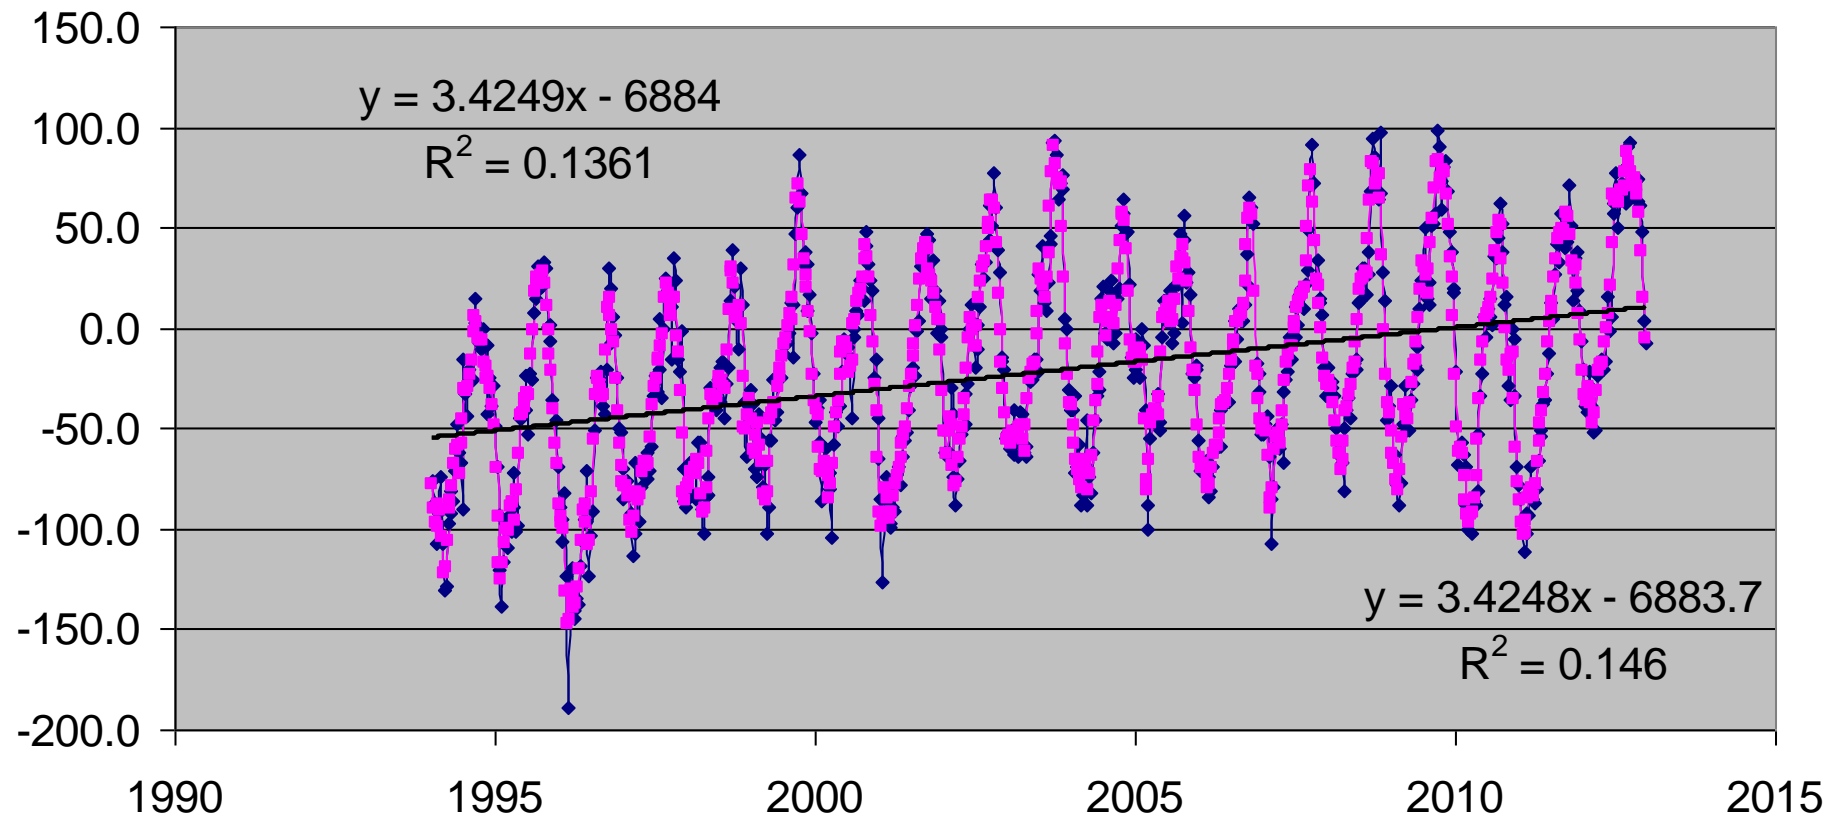

**RSLR=6.5 mm/yr**  
**RSLR=6.4 mm/yr**  
 Galveston, TX  
 Chenier Plain

# US Topex/Poseidon/Jason Satellite Records

TPJason Merged Satellite 1994-2012

## US TPJ Merged vs Euro AVISO Satellite Gulf of Mexico

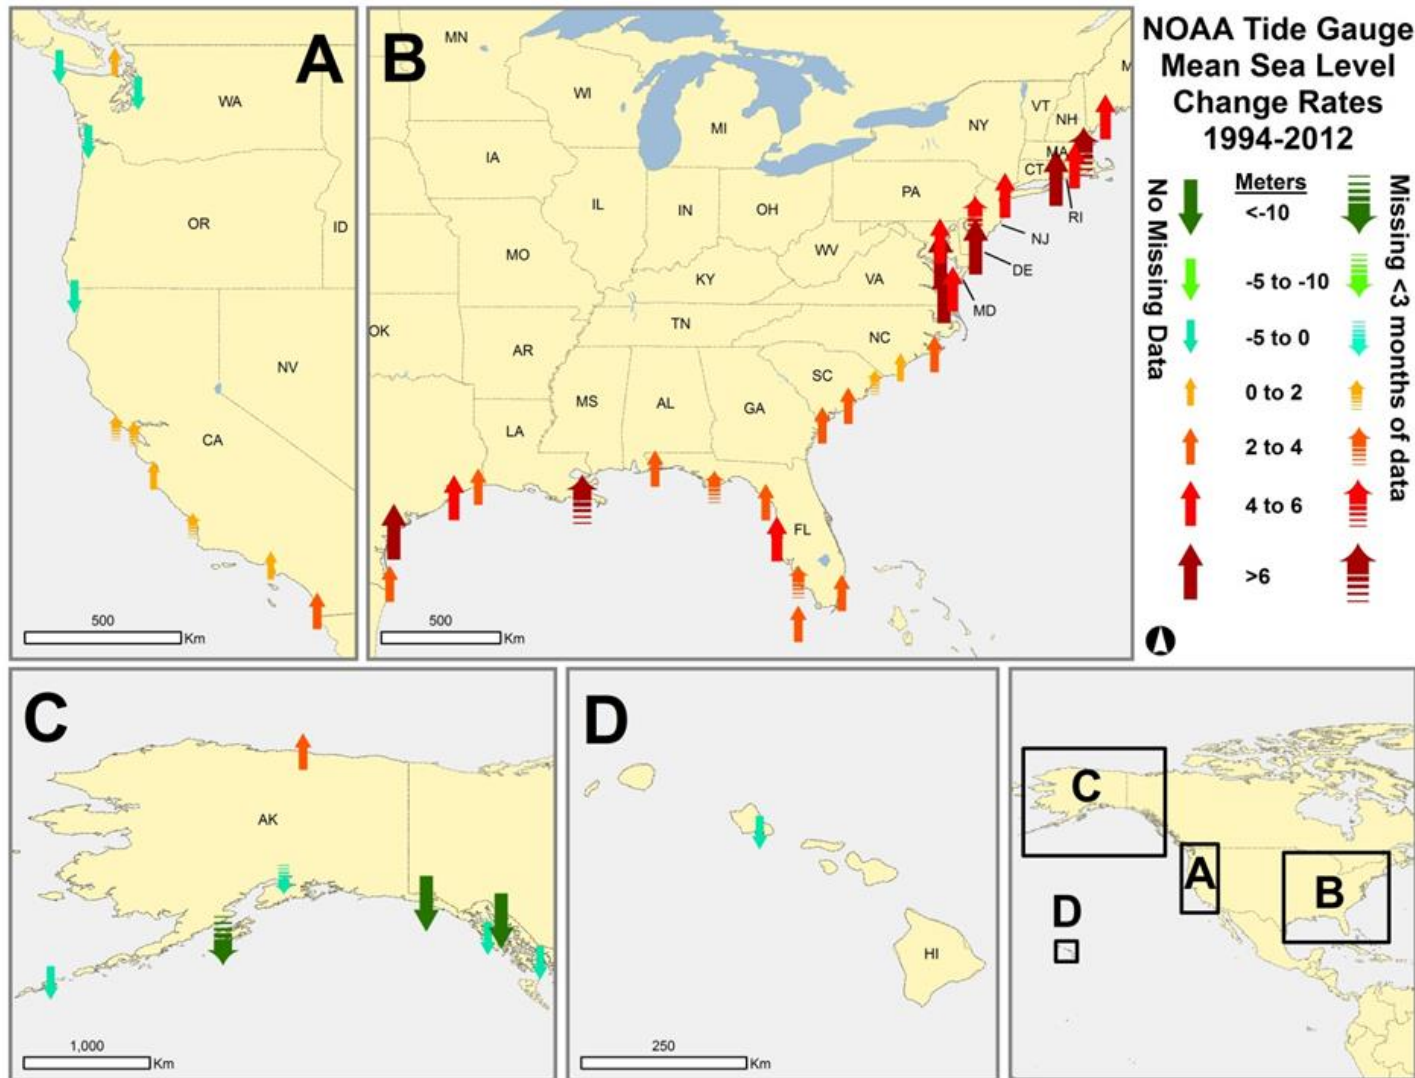

# Modeling and Comparing SLR Trends

## Tide Gage vs Satellite Records

- Rectifying to the Same Datum!
- Comparing the Same Time Periods!
- Complete Records - No Data Gaps!

# U.S. Tide Gage Relative SLR Trends Satellite Era (1994-2012)

# Satellite vs Tide Gages 1994-2012

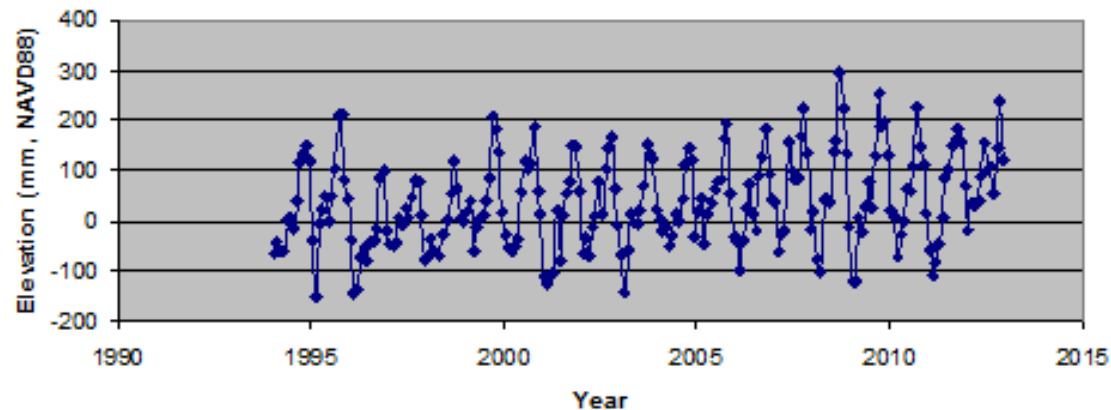

Observation Platform Location	SLR Trend (1994-2012) mm/yr	Residual Land Motion mm/yr
U.S. Topex/Poseidon/Jason	3.32*	-
European AVISO	3.32*	-
Key West, FL gage	4.42	1.10
Pensacola, FL gage	4.92	1.60
Grand Isle, LA gage	7.34	4.02
Galveston, TX gage	5.87	2.55

# Tide Gage SLR for earlier Tidal Epochs

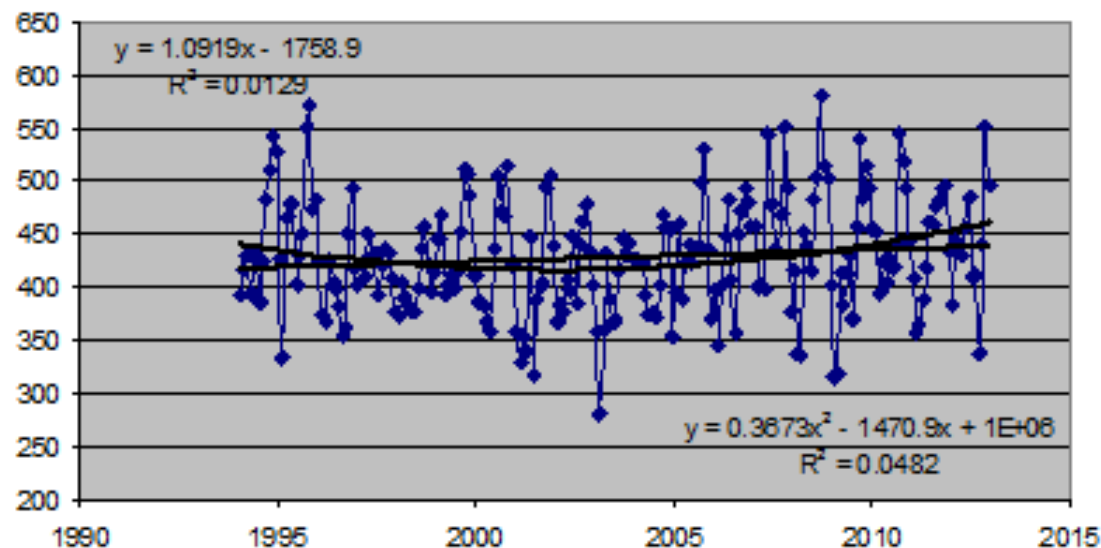

Tide Gage Location	1918-1936	1937-1956	1957-1974	1975-1993	1994-2012
City, State					
KeyWest, FL	Missing data	4.20	5.38	3.02	4.42
Pensacola, FL	Missing data	4.06	3.87	4.33	4.92
Galveston, TX	4.56	6.91	10.40	8.23	5.87
** Grand Isle					7.34

# Key West, FL Gage vs Satellite

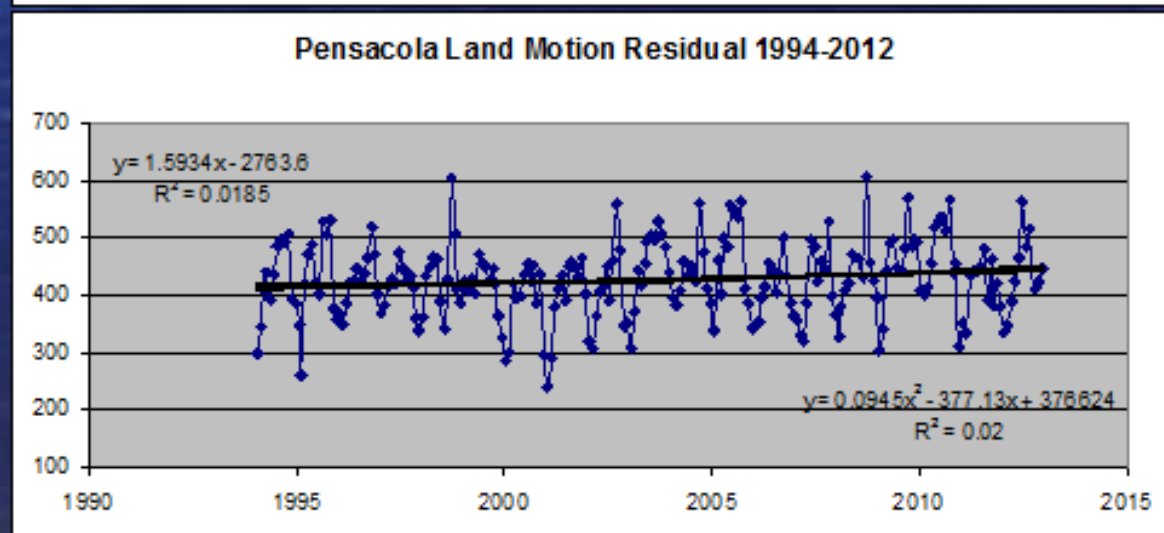

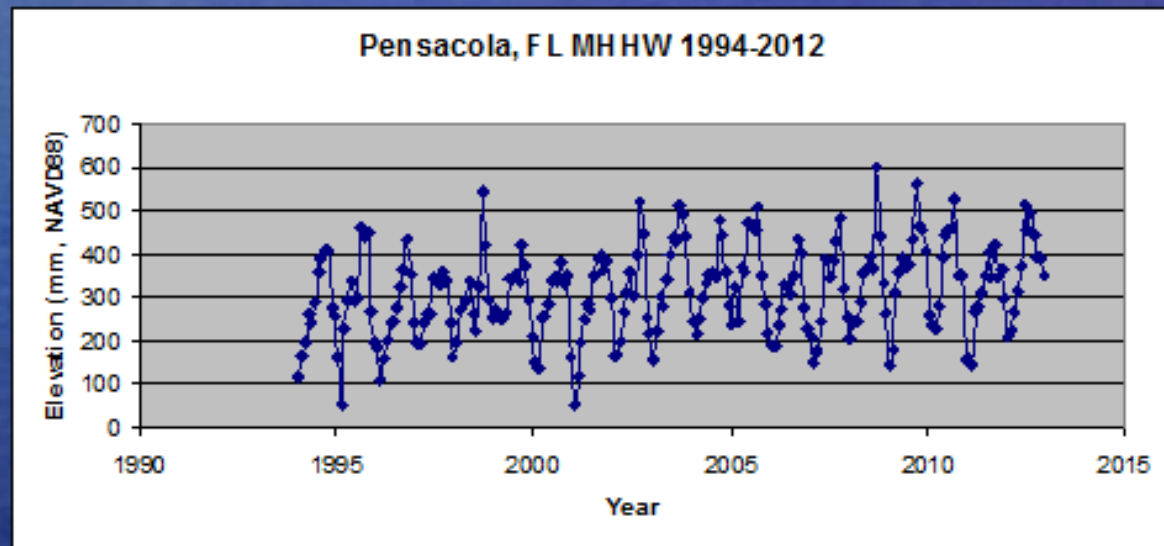

Key West, FL MHHW 1994-2012

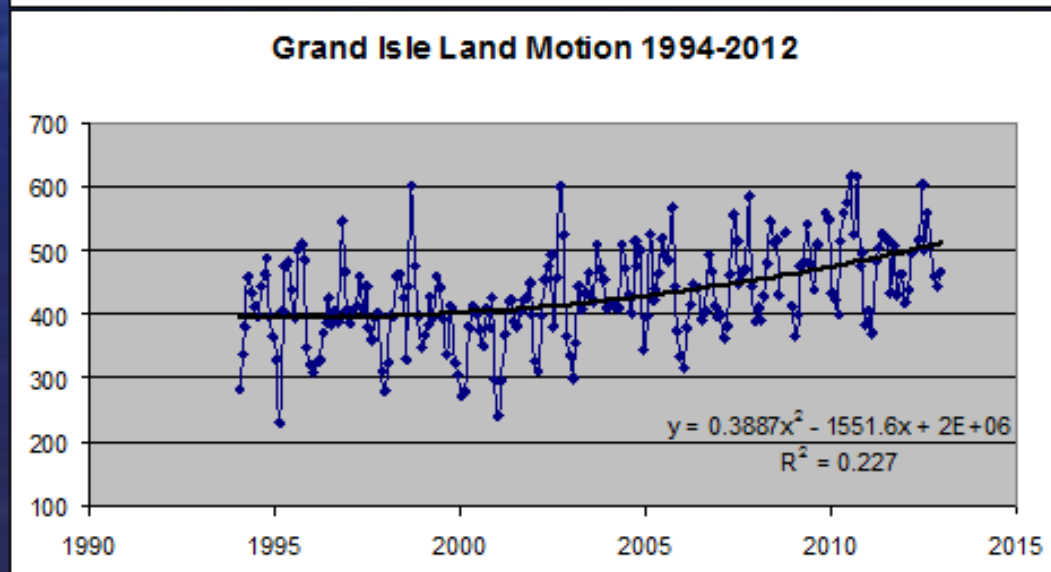

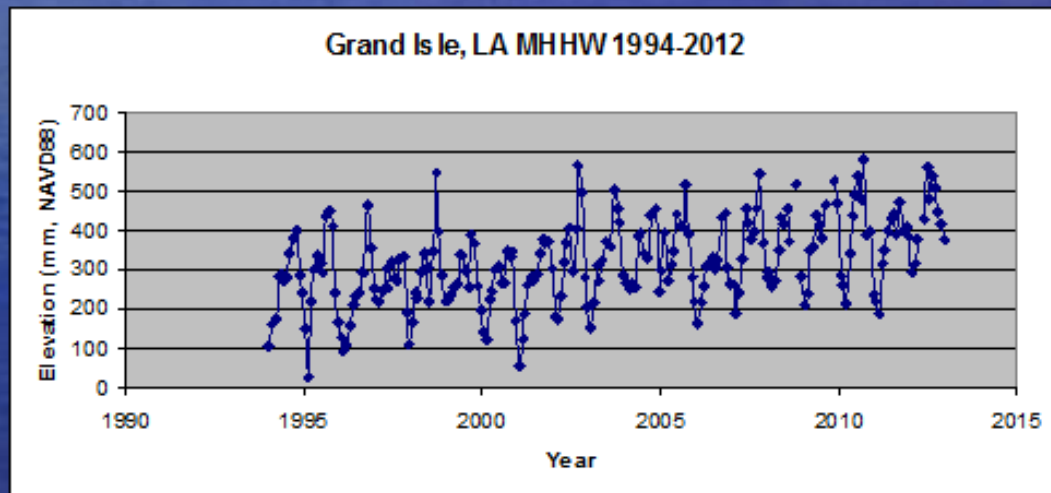

Key West Land Motion Residual 1994-2012

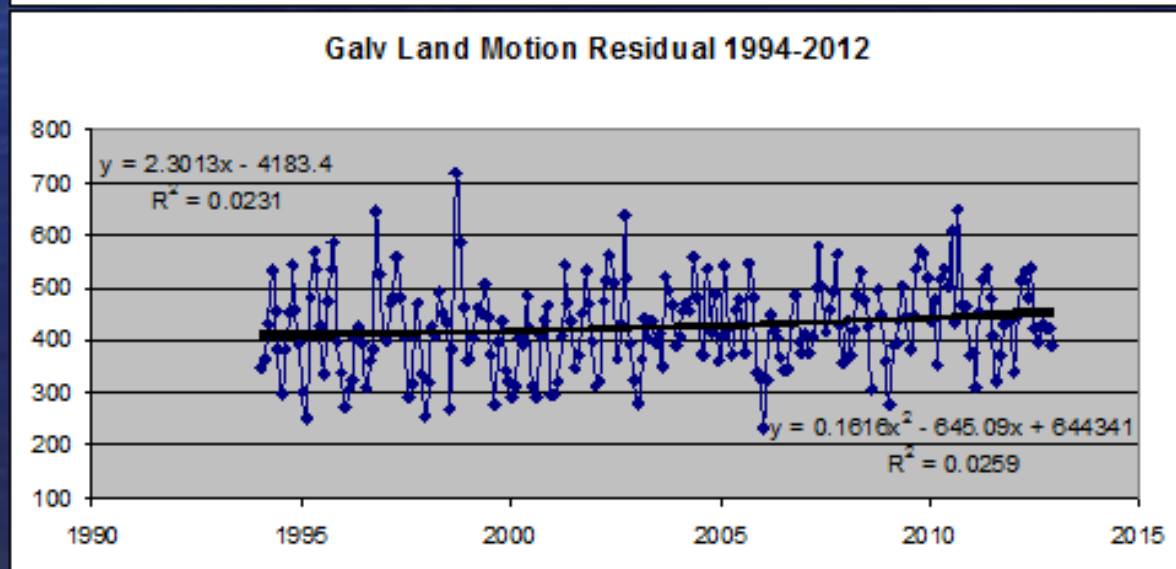

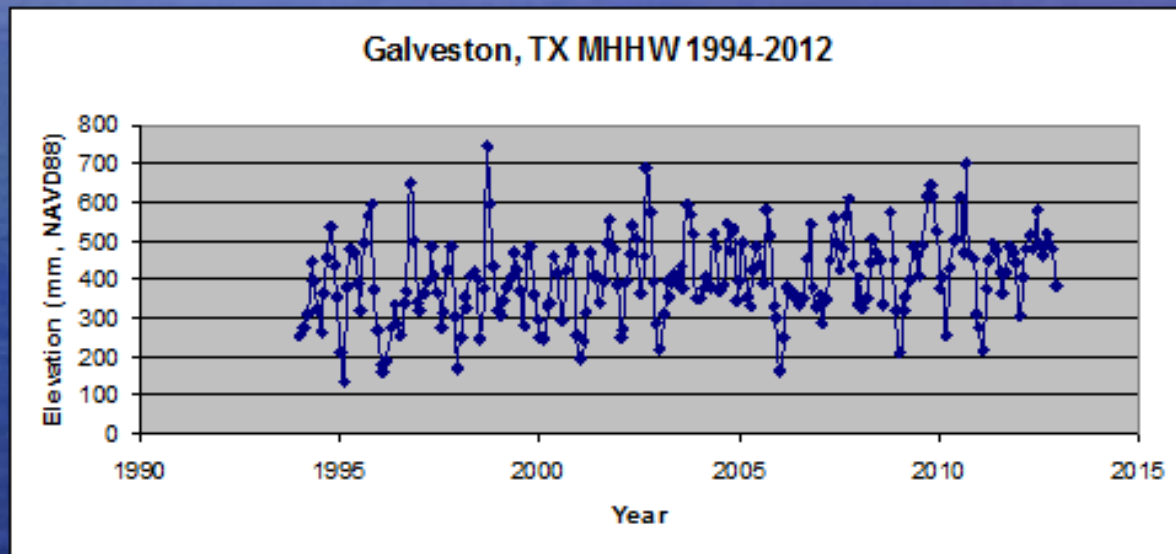

# Pensacola, FL Gage vs Satellite

# Grand Isle, LA Gage vs Satellite

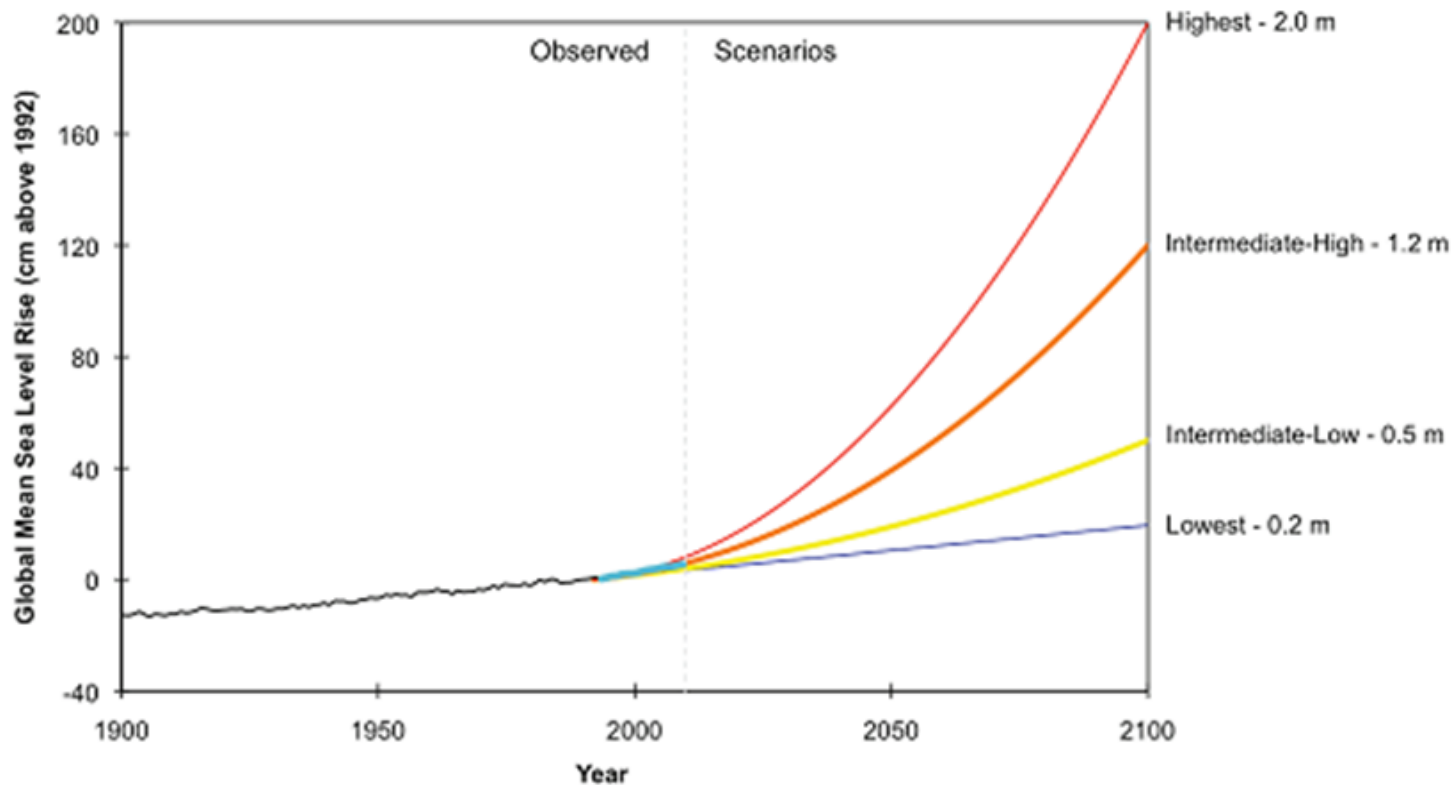

# Galveston, TX Gage vs Satellite

# National Climate Assessment 2012

## Future Sea-level Rise Projections

# Predictive Models of Sea-Level Rise

- Sea-level Rise Simulation and Inundation Models
- GIS Sea-level Rise Mapping Tools
- Wetland Change Models
- Surface Elevation and Shoreline Erosion Models
- Niche-Based Species Distribution Models
- Leaf to Landscape Ecosystem Models

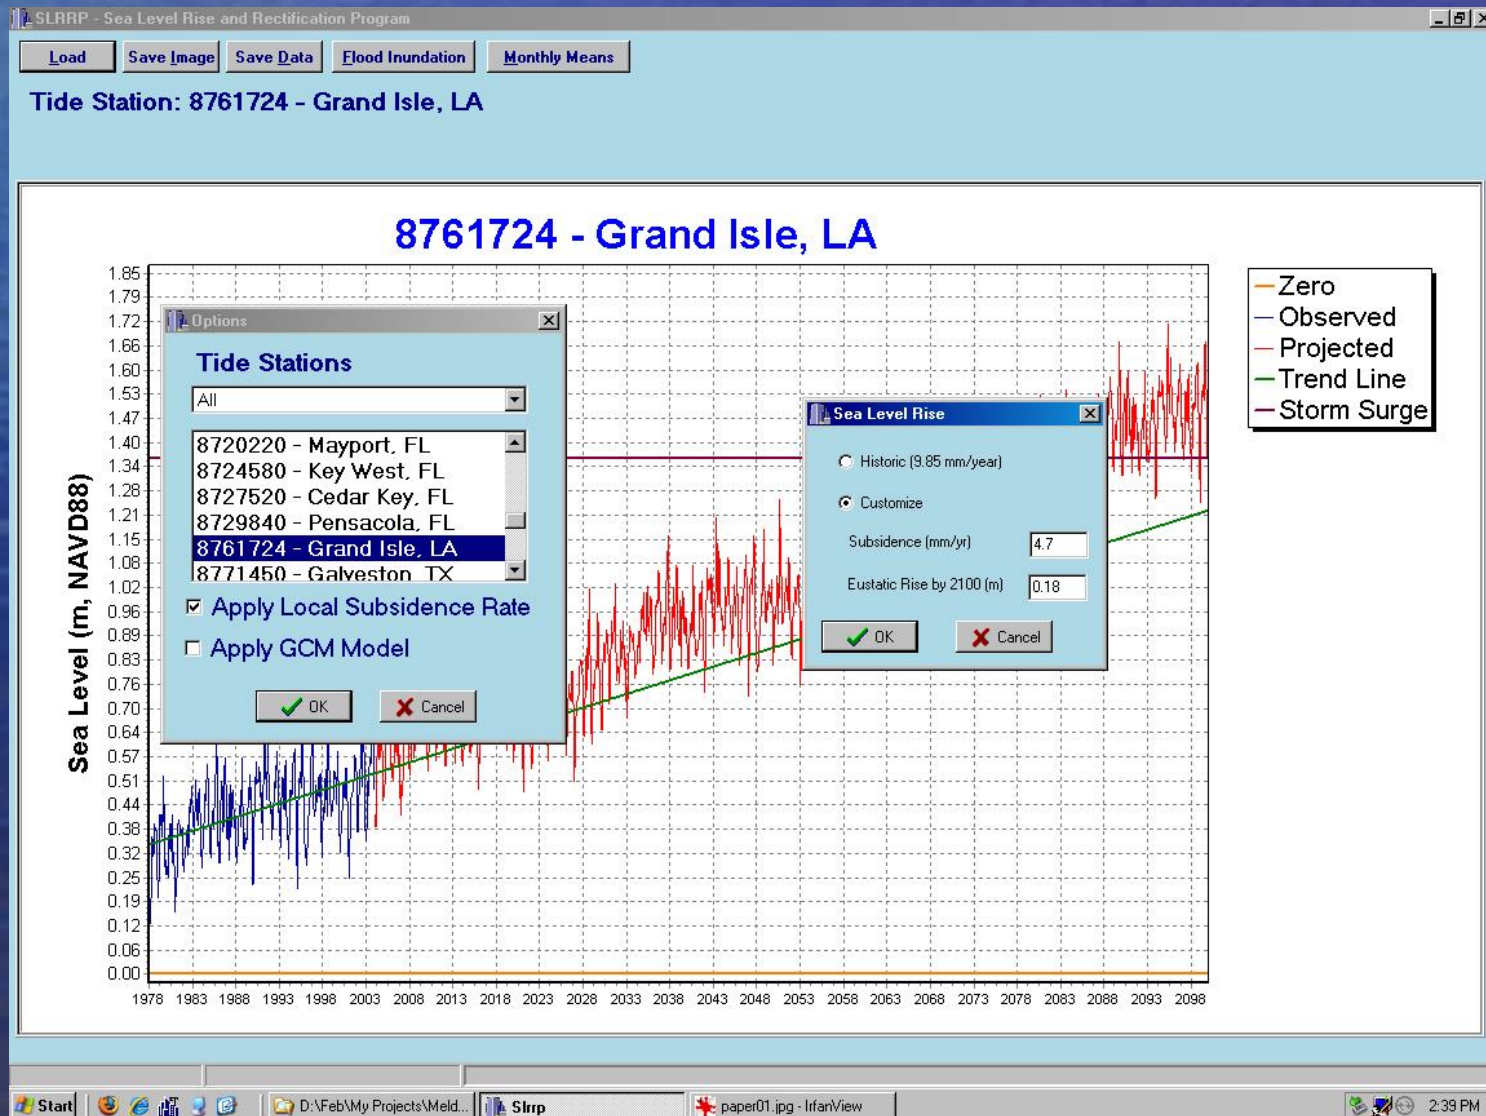

# Sample Table Layout of Model Descriptions

Table 3. Sea-Level Rise Simulation and Inundation Model attributes							
Model	Agency /Organization	Appropriate scale	Spatial resolution	Temporal scale	Input parameters	Output parameters	Citations
CoastCLIM Sea-level Simulator (component of the SimCLIM system)	CLIMsystems	Local, regional, global	Varies, determined by data availability and computation demands	Variable depending on impact model being run	Elevation, climatologies, site time-series data, patterns of climate and sea-level changes from GCMs, impact models	Maps of areas/habitats potentially vulnerable to inundation. May estimate adaptation costs.	Warrick 2006; Warrick and Cox 2007
NOAA Inundation Frequency Analysis	NOAA	Local	Not applicable	1 month - 5 years	Tide station, reference elevation, date range	Inundation duration, frequency of high water elevation or duration (tabular or graph format)	<a href="http://tidesandcurrents.noaa.gov/inundation/">http://tidesandcurrents.noaa.gov/inundation/</a> , Inundation Analysis Users' Guide
SLRRP Sea-Level Rectification Program	U.S. Geological Survey	Local, regional	Not applicable	Historic tide range + projection to 2100, monthly to annual time step	Tide station, local subsidence rate (historic or custom), GCM sea-level rise rate	Cumulative sea-level rise, flood inundation potential for given elevation	Keim et al. 2008
Temperature-based Sea-Level Rise Model	Potsdam Institute for Climate Impact Research	Global	Not applicable	1990-2100	Global mean sea level, mean temperature, time	Future mean sea level	Rahmstorf 2007
